## Jobs Report Not As Weak As Feared

Last week's ADP report was weak, leading to the market acting worried that the job market was weakening.

However, the opposite happened with the jobs report – it showed that the U.S. labor market, in fact, remains robust, with jobs still growing and the unemployment rate remaining steady at 4.2%. Wages did tick up a bit and that tells us that the consumer is making money. Remember: a strong labor market leads to a strong economy, and a strong economy leads to growing corporate profits, and growing corporate profits lead to stocks moving higher.

## The Unemployment Rate Remains Very Low

## Stocks Can Trade Sideways With Summer Rally To New Highs Expected

Despite all the tariff noise, the equity market has rallied sharply and is only 2.5% from record highs. Short-term, stocks are overbought, and price momentum is slowing, as we approach the previous highs. It is normal for markets to get choppy before breaking to new highs, so the month of June will likely see much back-and-forth trading, but we expect new highs to be reached this summer.

In our reports, we have highlighted how the market this year has been trading in a pattern very similar to 2018, during President Trump's first term in office. After a bear market correction, the S&P 500 rebounded to record highs within four months. If the S&P 500 continues to track this pattern, the index should be at a record high in August. Seasonally, equity markets tend to peak in the summer, with August often marking the seasonal high point.

We raised our S&P 500 target last week to 7200 over the next 12 months. We originally thought we could reach this target by the end of this year, but we think the tariffs have just postponed this move. In our view, the tariffs have temporarily interrupted the market's bull rally. At a 12% growth rate, 2Q25 earnings were much stronger than expected. We believe earnings will continue to grow as the economy is still expanding strongly, and because the job market also remains strong, the consumer still has discretionary spending money.

## 4 Bear Markets In 8 Years – Not Common

Historically, bear markets occurred about every four years, typically bringing 20%–30% corrections. In this current cycle, we've seen a 20%+ correction occur 4 times over an 8 year stretch. This is not normal. No wonder investors are nervous. The amount of volatility we have seen has been highly unusual. But what we have to remember is that corrections refresh markets ... so think of them as a reset. The main driver of stock behavior is earnings. Currently, earnings are growing but do remain scarce. So, in a scarce earnings environment, we see growth stocks outperforming, and this is what we have. Growth stocks, specifically Tech and Tech-related, remain the leaders.

## Consumers Still Have Money To Spend As Real Per Capita Income Is Rising

Jobs is one way to measure the strength of the U.S. consumer. Another is looking at their income. When we look at real per capita income (adjusted for inflation), it shows that the income level of the consumer is rising sharply.

## The Economy Is Still Growing With Atlanta FedNow Tracker At 3.8%

The Atlanta Federal Reserve has a real GDP model that estimates the growth in the economy. The model updates as new data becomes available. As of last week, the tracker was estimating the economy was growing at 3.8%. The model is volatile and will change with new data. The point to take away is that the economy is still growing and we are not moving into a recession. A growing economy allows corporate profits to continue to grow, which supports equity prices going higher.

## Gold & Gold Miners In Major Bull Market

We have been Bulls on gold and gold mining companies. We have been projecting that gold could rally to \$4000, and it seems to be right on target to reach this level. Gold mining stocks have just begun to now move, tracking the higher prices in gold. The smaller gold companies, known as the juniors, just broke out from an 11-year trading range and now follow the 12-year breakout in gold. We remain Bulls in this space. Silver, called “the poor man’s gold,” also just broke out to a new record high. The metals and the metal stocks are in a bull market, in our view.

## Sector Readings: Communication Services Strongest, Health Care Weakest, Technology Continues To Improve

Last week, Communication Services stayed top-ranked, while Health Care remained in last place. Technology continues to improve.

Our sector model analyzes S&P 500 GICS sector classifications, using a weighted measure of price momentum across three time periods. We rank each sector from best to worst based upon the average of its 40-, 26-, and 13-week relative price performances. We rank each sector from 1-10 with 1 being the strongest and 10 the weakest.

### Sector Rankings By 40-, 26-, And 13-Week Average Relative Price Performance

	Jun 6	May 30	May 23	May 16	May 9	May 2	Apr 25	Apr 18
Consumer Discretionary	6	4	5	3	7	7	7	10
Consumer Staples	7	7	6	7	3	3	1	1
Energy	10	10	10	10	10	11	9	8
Financials	3	2	4	1	1	1	3	3
Health Care	11	11	11	11	11	10	8	7
Industrials	2	3	2	2	4	5	5	5
Information Technology	4	6	7	6	8	8	10	11
Materials	9	9	8	9	9	9	11	9
Communication Services	1	1	1	4	5	4	4	6
Utilities	5	5	3	5	2	2	2	2
Real Estate	8	8	9	8	6	6	6	4

## OBOS List: Industrials Overbought While Health Care Oversold

This is our tactical sector rotation model using the S&P 500 GICs sector classifications. We apply a 13-week rate of change methodology that normalizes the rankings from overbought (OB) to oversold (OS). An industry group is overbought when it has risen too far too fast, relative to the rest of the market, based upon its normal movement. Conversely, it's oversold when it has lost too much too fast, relative to the rest of the market, based upon its normal movement. Over time, a sector tends to move back toward its normal rate of change, relative to the rest of the market. Overbought sectors tend to slow their pace of gains in relative price, while oversold sectors tend to improve in relative price until they reach their average performance again.

Here's our methodology: the overbought-oversold table of sectors measures the 13-week rate of change in the relative price of each sector. We then average (i.e., smooth) this for 3 weeks and normalize the results. Normalized oscillator values over 1.0 are considered overbought, while those between 0.6 and 1.0 are considered near overbought. Normalized oscillator values below -1.0 are considered oversold, while those between -0.6 and -1.0 are considered near oversold.

### Sector Overbought / Oversold List as of 6 June 2025

rank	S&P Sector	normalized Oscillator
1	Industrials	1.5249 <i>Overbought</i>
2	Utilities	0.6631 <i>Near Overbought</i>
3	Information Technology	0.4639 <i>Neutral</i>
4	Communication Services	0.3699
5	Consumer Staples	0.1258
6	Consumer Discretionary	-0.1187
7	Financials	-0.1766
8	Materials	-0.3141
9	Real Estate	-0.3428 <i>Neutral</i>
10	Energy	-0.9676 <i>Near Oversold</i>
11	Health Care	-2.0117 <i>Oversold</i>

## Inflation Data Is The Headline Focus

**This week it's ears to the ground, eyes wide open, and be ready for anything**

This week, the headlines that investors will focus on are the inflation gauges of the Consumer Price Index (CPI) and Producer Price Index (PPI). Tariff inflation has been on everyone's minds and, importantly, the Federal Reserve (Fed) has said they are watching inflation data closely. The market will also be very focused on weekly initial jobless claims to monitor the job market. Markets may be a bit choppy this week, reacting to headlines – including geopolitical commentary – but any pullback would be presenting a buying opportunity, in our view.
